Scoring the readiness to change questionnaire

The precontemplation items are numbers 1,5,10 and 12. The contemplation items are numbers 3, 4, 8 and 9. The Action items are numbers 2, 6, 7 and 11. All items are to be scored on a 5-point rating scale ranging from:

-2 Strongly disagree

-1 Disagree

0 Unsure

+1 Agree

+2 Strongly agree

To calculate the score for each scale, simply add the item scores for the scale in question. The range of each scale is -8 through 0 to +8. A negative score reflects an overall disagreement with items measuring the stage of change, whereas a positive score represents overall agreement. The highest score represents the Stage of Change Designation.

Note: If two scale scores are equal, then the scale further along the continuum of change (precontemplation, contemplation, action) represents the subject's Stage of Change Designation. For example, if a subject scores 6 on the Precontemplation scale, 6 on the Contemplation scale and -2 on the Action scale, then the subject is assigned to the Contemplation stage.

Note that positive scores on the Precontemplation scale signify a lack of readiness to change. To obtain a score for Precontemplation that represents the subject's degree of readiness to change, comparable to scores on the Contemplation and Action scales simply reverse the sign of the Precontemplation score (see below)

If one of the four items on a scale is missing, the subject's score for that scale should be prorated (i.e. multiplied by 1.33). If two or more items are missing, the scale score cannot be calculated. In this case, the Stage of Change Designation will be invalid.

Stage of Change designation

*Precontemplation score _____	Precontemplation _____ (reverse score)
#Contemplation score _____	Contemplation _____ (same score)
^Action score _____	Action _____ (same score)
